Willow Creek Road Realignment

To improve traffic flow, Willow Creek Road would be realigned between Pioneer Parkway and SR-89 at the newly constructed Deep Well Ranch Road roundabout as two travel lanes with paved shoulders. The proposed project is 8,800 feet in length and would include roadway grading, drainage and waterline installation, paving, and striping.

The project includes a new 12-inch waterline from Pioneer Parkway at Willow Creek Road to the intersection of MacCurdy/Clubhouse Drive at SR-89. The existing portion of Willow Creek Road and the right-of-way would be abandoned between the old SR-89 intersection to just north of Pioneer Parkway.

Willow Creek Road Realignment construction would occur after the existing construction along SR-89 is complete and prior to the south segment (Deep Well Ranch Road to Pioneer Parkway) of the SR-89 widening project begins.

Estimated construction in 2016.
